

MANN-FILTER

Product Information

No 151
11/06/2019

MANN-FILTER ensures cleanliness of highly sensitive parts

To protect the sensitive components within the vehicle, manufacturers set strict specifications regarding the cleanliness of all parts inside the engine. The production process and the finished filter are required to meet the highest cleanliness standards. Currently MANN-FILTER uses the CCM (Component Cleanliness Management) seal to meet these standards.

With immediate effect the current CCM seal will be replaced by a shrink wrap around the entire filter to ensure a safe and clean environment. Whilst the filter will look visually different there will be no change in the performance or alterations to the specifications.

Please continue to use the current CCM seal until stocks are depleted.

Following filter elements are affected:

- U 620/2 y
- U 620/3 y
- U 620/4 y
- PU 9003 z
