

FITTING INSTRUCTIONS

SHOCK ABSORBER FOR RENAULT LAGUNA II FRONT OE MODIFICATIONS

Renault Laguna II

FI094EU

- Because Monroe® is The Suspension Specialist, we are constantly adapting our offer to always perform at least as good as OE products.

Renault changed the design of its Renault Laguna II front strut for safety reasons. Therefore Monroe® is modifying the conception of their Strut too.

- The old Struts were having a small spring seat which was only supporting the first Spring's coil and not the second bigger one. If this second bigger coil would break, the sharp fracture would cut the tyre. (see drawing)

Old Mount
E4722 / 16326

New mount
E4760 / G7281

The new design of the Monroe® Strut has now a bigger spring seat as well, in order to support this second coil when the spring is compressed.

- These new Monroe® Struts G7281 & E4760 are replacing the previous ones 16326 & E4722 and they are both available for sales now.
