VKBA 3667

BMW (E36, E46) 3-Series/Coupe/Touring, Z3/Coupe, Z4 ⇨ 01/09/1990

SKF Design difference - Mandatory replacement of the cap included in the kit!

BMW Bearing OE Nb: 31 22 6 757 024

Wheelbearing side

The SKF bearing included in the Wheel bearing kit VKBA 3667 has no outboard seal on the wheel side of the bearing as shown on the right picture below. The outboard seal is not needed as the cap included in the SKF kit has a sealing function when mounting the bearing on the car.

The SKF bearing is pre-greased for life and in line with OE product quality and performance.

A/M design – with outboard seal

SKF design – without outboard seal

Inboard side

The SKF bearing on the inboard side has a metal seal that ensures a perfect sealing of the wheel bearing as per OE specifications.

A/M design – Rubber seal

SKF design – Metal seal

VKBA 3667

Note! As with all fastening products included into SKF kits, the cap and the nut should be changed at the same time for a complete and professional repair!
